

This project for The Children's Home of Reading was spearheaded by a group of residents interested in helping to spruce up the basketball court and ballfield on the CHOR main campus.

Stackhouse Bensinger Inc. was honored to volunteer the engineering and landscape architecture support for the design of the renovations. SBI helped design the regraded ballfield and the layout design of the bases and pitching areas. The field was seeded using hydro seeding equipment. The project also included improvements to the basketball court. In the future the project would be expanded to eventually include a building and pavilion.

SBI was recognized at a "Field of Dreams" dedication along with numerous other organizations, companies and individuals who were part of making this dream a reality.
