

The Wilson School District engaged SBI to develop construction drawings that maximized the Middle School campus potential. The project included a new 126,500 square foot school building and associated parking lots. SBI also provided a design with two competition level turf fields; including an all new facility with sports lighting, a new football stadium and synthetic track and competition high-school baseball fields and tennis courts. The planning effort allows the school district ample room for future development and expansion while providing Wilson with top notch athletic facilities.

The project scope included:

- Athletic Facility Planning and Design
- Preliminary and Final Land Development Plans
- Vehicular and Pedestrian Circulation Patterns
- Parking Layout
- Storm Drainage and Erosion & Sediment Control
- Grading and Landscaping
- Utility Design and Site Lighting
- Preparation of Construction Documents
- Municipal Approvals

The key element of this project was to blend the proposed improvements into the existing setting and environment. Landscaping the area with raised berms and providing connections to the existing Elementary School provided a balance of function and aesthetics.
