

A long-standing client, the Wilson School District engaged Stackhouse Bensinger, Inc. to develop a Master Plan that maximized the high school campus potential. SBI provided a design with two competition level synthetic turf fields, including an all new facility with sports lighting and a complete renovation of the existing football stadium and synthetic track. Innovative storm water design allowed the school to recapture land that had previously been dedicated to a large surface detention basin. The planning effort allows the school district ample room for future development and expansion while providing Wilson with top-notch athletic facilities.

- Athletic facility planning and design
- Preliminary and Final Land Development Plans
- Vehicular and pedestrian circulation patterns
- Parking layout
- Storm drainage and Erosion and Sediment Control design
- Grading and landscaping
- Utility design and site lighting
- Municipal approvals
- Preparation of construction documents

Wilson Campus Master Plan
